

Instructional AI

Instructional AI enhances critical thinking and writing skills through instant feedback on discussions and essays, allowing teachers to prioritize feedback on students' ideas.

Benefits for Students

Instructional AI promotes equal educational opportunities for all students, fostering a collaborative and academically supportive environment. Our AI-driven feedback system, akin to personalized tutoring, empowers students to:

- Develop student agency.
- Cultivate their distinctive voices in their writing.
- Ask higher-level questions.
- Acquire essential WICOR® skills crucial for success.

High-interest topics, a social-media-like environment, and gamification elements prompt students to drive rigorous discussions—a great fit with AVID strategies such as Socratic Seminars and Philosophical Chairs.

Benefits for Educators

AI feedback serves as a teaching assistant, saving time on grading and providing teachers with individualized insights that help scaffold each student up to higher-order inquiry and writing skills. Instructional AI in the AVID classroom empowers teachers to maximize their precious teaching minutes by:

- Saving teachers time, reducing grading workload.
- Eliminating unintended grading inconsistencies.
- Providing valuable suggestions for essay assessment methods and rationales.
- Issuing alerts for both traditional and AI-detected plagiarism.
- Allowing teachers to shift their focus and allocate more time to engage with students.
